● GAPDETECT

Description

This command feeds the paper through the gap sensor in an effort to determine the paper and gap sizes, respectively. This command references the user's approximate measurements. If the measurements conflict with the actual size, the GAPDETECT command will not work properly. This calibration method can be applied to the labels with pre-printed logos or texts.

Syntax

GAPDETECT [x,y]

Parameter	Description
X	Paper length (in dots)
Y	Gap length (in dots)

Note:
If the x, y parameters are ignored then the printer will calibrate and determine the paper length and gap size automatically.

See Also

GAP, SIZE, BLINEDETECT, AUTODETECT

● BLINEDETECT

Description

This command feeds the paper through the black mark sensor in an effort to determine the paper and black mark sizes, respectively. This command references the user's approximate measurements. If the measurements conflict with the actual size, the BLINEDETECT command will not work properly. This calibration method can be applied to the labels with pre-printed logos or texts.

Syntax

BLINEDETECT [x,y]

Parameter	Description
x	Paper length (in dots)
y	Gap length (in dots)

Note:
If the x, y parameters are ignored then the printer will calibrate and determine the paper length and gap size automatically.

See Also

GAP, SIZE, GAPDETECT, AUTODETECT

● AUTODETECT

Description

This command feeds the paper through the gap/black mark sensor in an effort to determine the paper and gap/black mark sizes, respectively. This command references the user's approximate measurements. If the measurements conflict with the actual size, the AUTODETECT command will not work properly. This calibration method can be applied to the labels with pre-printed logos or texts.

Syntax

AUTODETECT [x,y]

Parameter	Description
x	Paper length (in dots)
y	Gap length (in dots)

Note:

- ***If the x, y parameters are ignored then the printer will calibrate and determine the paper length and gap/black mark size automatically.***
- ***When using this command, the printer will detect the label by the proper sensor type so please don't set the command GAP or BLINE in your program.***
- ***It is supported in firmware V6.86 EZ or later.***

See Also

GAP, SIZE, GAPDETECT, BLINEDETECT

BLINE

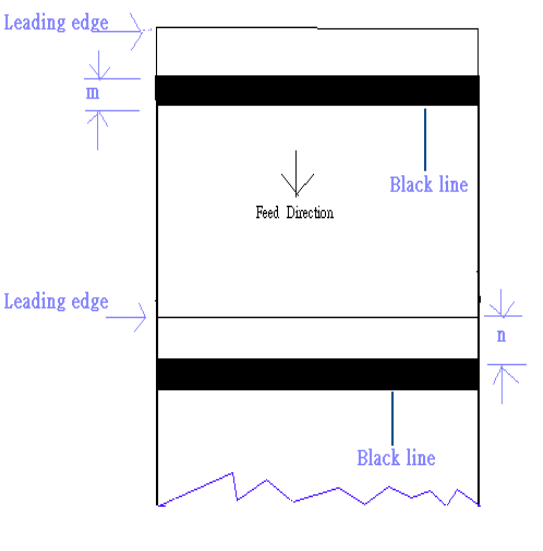
Description

This command sets the height of the black line and the user-defined extra label feeding length each form feed takes.

Syntax

BLINE m,n	English system (inch)
BLINE m mm,n mm	Metric system (mm)
BLINE m dot,n dot	Dot measurement ***This command has been supported since V6.27 EZ and later firmware.***

Parameter	**Description**
m	The height of black line either in inch or mm 0 ≤ m ≤ 1 (inch), 0 ≤ m ≤ 25.4 (mm) 0 ≤ m ≤5 (inch), 0 ≤ m ≤ 127 (mm) / ***since V6.21 EZ and later firmware***
n	The extra label feeding length 0 ≤ n ≤ label length
0,0	Continuous label



Note:

- ***For metric system, there must be a space between parameter and mm.***
- ***When the sensor type is changed from "GAP" to "Black Mark", please send the "BLINE" command to the printer first.***
- ***200 DPI : 1 mm = 8 dots***
  300 DPI : 1mm = 12 dots

Example

Sample Code

- English system (inch):
  BLINE 0.20,0.50

- Metric system (mm):
  BLINE 5.08 mm,12.7 mm

SIZE, GAP

● OFFSET

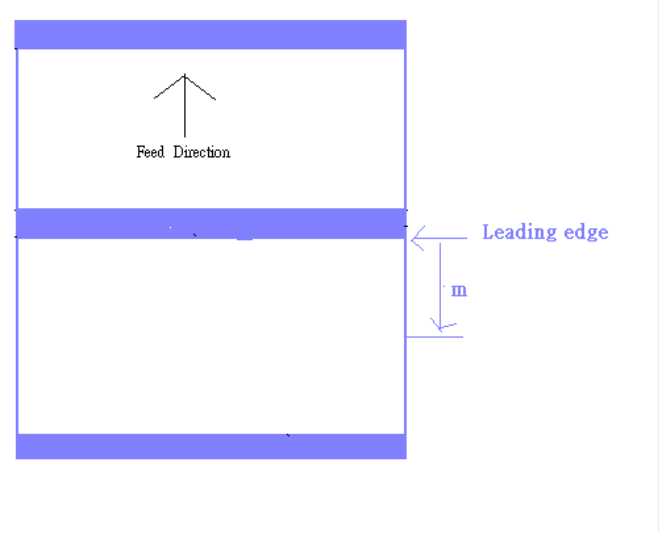
Description

This command defines the selective, extra label feeding length each form feed takes, which, especially in peel-off mode and cutter mode, is used to adjust label stop position, so as for label to register at proper places for the intended purposes. The printer back tracks the extra feeding length before the next run of printing.

Syntax

OFFSET m	English system (inch)
OFFSET m mm	Metric system (mm)
OFFSET m dot	Dot measurement ***This command has been supported since V6.27 EZ and later firmware.***

Parameter	**Description**
m	The offset distance (inch or mm) -1 ≤ m ≤ 1 (inch)



CAUTION:

- ***Impropriety offset value may cause paper jam.***
- ***For metric system, there must be a space between parameter and mm.***
- ***200 DPI : 1 mm = 8 dots***
  300 DPI : 1mm = 12 dots

Example

Sample Code

- English system (inch):
  OFFSET 0.5

- Metric system (mm):
  OFFSET 12.7 mm

File Management Commands

● DOWNLOAD

Description

"DOWNLOAD" is a header of the file that is to be saved in the printer's memory. The downloaded files can be divided into two categories: program files and data files (including text data files, PCX graphic files and bitmap font files) The detailed descriptions regarding the download syntax for different files are as follows:

Maximum numbers of file saved in DRAM:

50 files for TSPL/TSPL2 language printers

Maximum numbers of file saved in Flash memory:

50 files for TSPL language printers
256 files for TSPL2 language printers

Please refer to printer model list for checking TSPL or TSPL2.

If "AUTO.BAS" exists in the printer memory, it will be automatically executed upon printer startup. To disable the auto execution function, please follow the procedures below.

Ignore AUTO.BAS
For two buttons desktop printer series Hold down the **PAUSE** and **FEED** buttons and turn on the printer power. Do not release the buttons until the three LEDs flash in turn. Printer will Ignore AUTO.BAS and initialize the printer.
For one button desktop printer series Hold the FEED key and power on the switch. Release the FEED key while LED becomes solid green to prevent the printer from running "AUTO.BAS". The LED color will be changed as following pattern: ***For firmware version before V3.37 printer:** Orange → red (5 blinks) → orange (5 blinks) → green (5 blinks) → solid green ***For firmware version after V3.37:** Orange → red (5 blinks) → orange (5 blinks) → green (5 blinks) → green and orange (5 blinks) → red and orange (5 blinks) → solid green
For three buttons industrial printer series Hold the FEED key and power on the switch. The ERROR LED will be on. Printer is now ready to use.
For six or two buttons industrial printer series Hold the PAUSE and FEED keys and power on the switch. "AUTO.BAS" will not be executed after printer initialization, and will now be ready for use. Alternatively, hold the PAUSE key and power on the switch. After sensor calibration, the "AUTO.BAS" will not be executed. Printer is now ready for use.

● SET GAP

Description

This setting sets the gap sensor emission sensitivity. The printer initiates automatic gap sensor calibration when the PAUSE key is held down while powering up. This function may cease to work if the thickness of the backing paper and that of label with backing paper are not of appreciable difference to the sensor, or when there are pre-printed marks or patterns on the label. In such case, users must calibrate the gap sensor manually by this command through trial-and-error method to attain the proper setting. This setting will be saved in printer memory when turning off the power.

Syntax

SET GAP n/AUTO/OFF/0,/REVERSE/OBVERSE

Parameter	Description
N	Gap sensor light emission strength. Available range is listed as below. 0 is the lowest sensitivity
AUTO	The printer will feed 2 or 3 labels to calibrate the gap. If the label is continuous, the printer will feed label to limit 10~20 inches to confirm if the label is continuous.
OFF	Disable the SET GAP AUTO function.
0,	Automatically calibrate the gap size.
REVERSE	This function is used when the Black Mark is the separation in the front of the label and which can't be detected by the Black Mark sensor. The parts of the media which can be passed through by GAP sensor are defined to be the printable area, otherwise it will be defined to the GAP of the media.
OBVERSE	Disable the "SET GAP REVERSE " function.
